

UpSwung Fixed In-ground Stainless Steel Bollards

Excellent for access control security installations.

Why use Stainless Steel? Stainless bollards have many advantages over painted bollards. Stainless Steel Bollards don't rust in the worse of environments. They never need to be repainted like painted bollards and graffiti is easily removed with cleaning products.

Why use Fixed Bollards? Fixed Bollards are very easy to install. No In-ground connections are required which results in large installation savings. Requires only minor excavation and concrete. They are designed to match our other bollard types.

UpSwung FI133, 168 & 220/900SS Fixed In-Ground Bollards

The Fixed traffic bollard is suitable for mixed installations while maintaining the same architectural design. (non-retractable) This type of bollard can be set in the ground using concrete. It can be used when accesses are limited, or combined with automatic/ semi-automatic versions. It solves transit and/or parking problems, at a reasonable cost, without the need for electrical energy.
