## **Upswung** Removable Stainless Steel Bollards

Excellent for access control security installations.

**Why use Stainless Steel Bollards?** Stainless bollards have many advantages over painted bollards. Stainless Steel Bollards don't rust even in the worse of environments. They never need to be repainted like painted bollards and graffiti is easily removed with cleaning products.

**Why use Removable Bollards?** Removable bollards very easy to install. No In-ground connections are required which results in large installation savings. Can be operated at the bollard with a simple removable key and are designed to match our other bollard types.

### **Upswung R114, 133, &168 /900SS Removable Bollards**

The Removable traffic bollard is suitable for mixed installations while maintaining the same architectural design as our other bollards. This type of bollard can be removed and a cover plate (pictured below) covers the hole to remove the tripping hazard. It requires only minor excavation to set the bollard pocket assembly. It can be used when accesses are limited, or combined with automatic/ semi-automatic versions.

It solves transit and/or parking problems, at a reasonable cost, without the need for electrical energy; in fact, thanks to the single-effect gas actuator, lifting occurs automatically with a key, whereas lowering is achieved by slight foot pressure on the head of the concealed bollard.

# Specifications:

Model	UPS 114/900	UPS A133/900	UPS A168/900
Operation mode	Removable	Removable	Removable
Material	Stainless Steel	Stainless Steel	Stainless Steel
Diameter	114mm ( 4.5")	133mm ( 5.2")	168mm ( 6.6")
Height	900mm ( 35.4")	900mm (35.4")	900mm (35.4")
